

The new international Great-Lengths-Logo

For a perfect use there are three - print-optimised - file-formats available: eps, ai and pdf. These files are assembled as vektor-data and so you can use the new logo in any size you need - enlarged or reduced!
Please - never convert and use the files in jpg, tif or in any other pixel-file!
The logo will lose his scalability! Files in jpg or gif are only to be used in the web.

The logo is available in three color-spaces:

- CMYK for colored ads, flysheets, brochures,...
- PANTONE for business cards, letter papers,...
- MONOCHROME for black and white ads, black and white flyers,...
